

# Assignment 15

## Portfolio Project – Part 3

### Instructions:

- Add the following content to the portfolio.html page
  - A navbar with links to all the pages
    - Fix it to the top of the screen (position: fixed;)
    - All other content should scroll under it and not on top (z-index).
  - A container that is less than 100% of the screen width
    - It needs to contain at least six portfolio images.
    - If you have projects you want to display here, that would be great. Otherwise you may just use placeholder images
    - On a large screen, the images should be displayed in two or more columns
    - The page should be responsive. Use a responsive design or add media queries so the content can be seen on smaller devices without scrolling horizontally
